7 PRODUCTIVITY GAINS AND OPERATING COST CONTROL

- Multipurpose tyre on cycles up to **19 km in an hour**, due to a new crown design, C2 technology
- + adapted under tread layer.
- Strong tyre with longer service life:
- improved shock-absorption capacity (sidewall protection rib);
- even wear:
- wide tread pattern in the centre and squarer at the shoulders.
- Design and rubber mixes give full wear life in harshest conditions.

7 SAFETY

- High traction potential on slippery surfaces. Makes machine easier to drive, reduces vibrations, provides excellent lateral grip and allows precise steering.
- Optimised tread pattern with an oblique design and a massive, continuous central tread.

REPAIRABILITY AND RETREADABILITY MAXIMIZED THANKS

(##) provided that the worn tyre answers criteria of retreading and/or repair.

BENEFITS OF THE MICHELIN® RADIAL TECHNIQUE

- longer tyre life
- better traction on all types of surface
- lower fuel consumption
- improved comfort
- increased resistance to punctures / flats
- increased heat resistance
