

MICHELIN YELDBIBS LAST TWICE AS LONG FOR CORNISH CONTRACTOR

GRIGG-AGRI

Grigg-Agri operates from its base at Stone Farm, St Mabyn, in Bodmin. The business offers a variety of agricultural services, including spraying arable crops across Cornwall.

MICHELIN'S APPROACH

Grigg-Agri has invested in another set of VF 420/85 R34 MICHELIN YieldBib tyres for its two Bateman RB35 sprayers after the original equipment rubber lasted twice as long as the tyres it had run in the past. The two sprayers are used to support a wide range of arable crops across the county, clocking up significant mileage on country roads as they travel between farms.

Mark Grigg, Owner of Grigg-Agri, says: "The longevity and performance of the YieldBib tyres has been really impressive. We had used a different product in the past, but Bateman fitted the Michelins to these two sprayers as original equipment and they lasted for four seasons, whereas the old tyres would only ever last for two seasons.

"Both sprayers are loaded with 4,000 litre tanks and are very heavy vehicles doing a lot of road work. But the YieldBibs stood up to the challenge, clocking up 4,500 hours before we had to switch to the new set."

MICHELIN YieldBib tyres benefit from patented Ultraflex Technology, meaning they can carry the same load as a standard technology tyre, but with up to 40 per cent reduced inflation pressure and without compromising on robustness. They also boast Very High Flexion (VF) casings, giving a 24 per cent larger surface footprint. Other key features include stubble-deflecting lugs and an anti-stubble belt in the tread area, designed to strengthen the main zone at risk of damage caused by stubble, bolstering the tyres' durability.

RESULTS

"We've found these tyres really protect the crops," says Grigg. "They fit down the rows very well and minimise any damage in the field. Fitting a cheaper option may have saved us a little bit of money initially but in-depth studies have shown running these low pressure Ultraflex Technology tyres could boost yields by 4 per cent, plus they've lasted twice as long, so we know Michelin offers the best value in the long run."

As well as the YieldBibs, Grigg-Agri has also invested in a new set of MICHELIN MachXBibs for its John Deere 6210R tractor. All tyres have been supplied and fitted by Geoffrey Harris Tyres, a longstanding member of the Michelin Exelagri network.

"The first set of MachXBibs we ran recorded 8,500 hours which we were very pleased with, so we didn't hesitate in opting for the same tyres again," says Grigg.

"The support we've had from our local Michelin rep has been excellent too, as well as the team at Geoffrey Harris Tyres. We've traded with them for many years and they have always been very fair and great to deal with."

*"WE'VE FOUND
THESE TYRES
REALLY PROTECT
THE CROPS. THEY
FIT DOWN THE
ROWS VERY WELL
AND MINIMISE ANY
DAMAGE IN THE
FIELD."*
