(1) The U.S. EPA as part of their SmartWay® Program has demonstrated incremental fuel savings when low rolling resistance tires are used just on the tractor and/or just on the trailer. Actual results may vary, and may be impacted by many factors, to include road conditions, weather, environment, combination of steer and drive tires used, driving habits, tire size, equipment, and maintenance.

(2) See business.michelinman.com for details.

(3) Tread widths with two measurements have wings. The first number is tread base width in mm. The second number is the overall width, wing tip to tip.

- Federal Motor Carrier Safety Regulations, 9 C.F.R. § 395.75 (d), specify that “no bus shall be operated with regrooved, recapped or retreaded tires on the front wheels.”
- Retread tread selection should always consider the casing’s original service application design and speed limit as published in that tire manufacturer’s data book. Applying treads intended for a more severe service / speed application than the original casing design or that would imply a higher speed service than the casing’s original speed rating, is generally not recommended.
