

## MICHELIN 295/75R22.5 and 285/75R24.5 Dimensions

- This Technical Bulletin addresses the introduction of 295/75R22.5 and 285/75R24.5 dimensions in Michelin, BFGoodrich and Uniroyal commercial truck tires. Michelin has historically designated our low-profile 22.5 and 24.5 dimensional offers as 275/80.
- Michelin will gradually shift to 295/75R22.5 and 285/75R24.5 dimensions as new tire lines are launched to be more consistent with the common commercial truck sizes in the North American market and to simplify the dimensional offer for our customers.
- Within the same seat size, 295/75 and 285/75 tires are generally considered interchangeable on tractors and trailers with 275/80 tires, providing the tires meet all current industry tire mixability guidelines including those for diameter matching of tires in a dual pair.
- The approved rim widths for these dimensions depends on which design standard is being applied. In the case of these Michelin dimensions, the standard applied may be either the US Tire and Rim Association (T&RA) or the European Tire and Rim Technical Organization (ETRTO). Michelin recommended rim widths for these dimensions are provided in the table below with the 8.25" rim being both common to all four dimensions and the most widely used in North America.

Dimension	Michelin Recommended Rim Width (in.)
275/80R22.5	7.50, 8.25
295/75R22.5	8.25, 9.00
275/80R24.5	7.50, 8.25
285/75R24.5	7.50, 8.25, 9.00
