(1) Inflation pressure inserted with tyre and wheel at ambient temperature, just before the first ride or installing heating blankets.
 (2) Michelin recommends setting the heating blanket temperature at 90°C. Pressure values are indicative and depend on the equipment and its good working order.

FRONT

REAR

Minimum cold pressure on circuit ⁽¹⁾	2,1	1,3
Hot pressure under heating blankets ⁽²⁾	2,3	1,5
Hot target pressure (after 4 laps)	2,4	1,6
